# Elofid and its tools

## What is Elofid?

Security infrastructure for Web3. Elofid shows what a token, a contract or a wallet permission can really do, before you sign, buy or connect. It includes the Security Hub, the Elofid Scanner Bot on Telegram, the Firewall, Continuous Monitoring and the Developer API.

## Is Elofid the same project as CycleX Network?

Yes. Elofid is the new name of CycleX Network. Same team, same products and the same engine. Old [cyclex.network](https://cyclex.network) links redirect to [elofid.com](https://elofid.com) automatically.

## What does a token scan check?

**Quick Scan** checks contract controls (owner, mint, pause, blacklist and proxy), liquidity, LP lock and burn evidence, holder concentration and market structure. **Deep Intelligence** adds a real buy and sell simulation through the token's DEX router to detect honeypots and measure buy, sell and transfer tax, plus deployer history, early-buyer activity, shared-funding wallets, LP lock expiry and ownership history.

## What does "unknown" mean in a report?

It means the data could not be verified, for example because a provider did not respond or the history was incomplete. Elofid never shows missing data as zero, "none" or "safe". Figures read directly from the blockchain are marked as verified on-chain.

## Do I need to connect my wallet to scan a token?

No. Token scans read public blockchain data only. No wallet connection, signature or seed phrase is ever needed to scan.

## Which networks are supported?

12 networks: BNB Smart Chain, Ethereum, Base, Arbitrum, Polygon, Optimism, Avalanche, Linea, Scroll, opBNB, Robinhood Chain and Solana.

## Does it cost anything to scan a token?

No. Scanning on the Security Hub and in the Scanner Bot is free. The Developer API has a Free plan and paid plans with higher quotas and longer history.

## Elofid inside Telegram

### How do I use the Scanner Bot?

Open @ElofidBot and send a token contract address, or any sentence that contains one. You get a structured report in seconds, with buttons for More Details, the Full Report and sharing the scan.

---

### Can I add the bot to my group?

Yes. Add @ElofidBot to a group and members can check a token right in the chat before buying.

---

### Can I use it in a chat where the bot is not a member?

Yes. In any chat, type @ElofidBot followed by a contract address and choose the result. A live report is posted in that conversation.

---

### What is Exit Path?

An estimate of how much can realistically be sold through the available pools. It is shown as an exact value when coverage is complete, as "at least" when coverage is partial, and never invented when it cannot be verified.

---

### What happened to @CyclexScannerBot?

The scanner moved to @ElofidBot. The old bot now only points people to the new one. If you added the old bot to a group, add @ElofidBot and remove the old one.

---

## Protecting the wallet you already use

### What is Blast Radius?

A map of every active token approval on a wallet and the value each spender could move. Known protocol spenders are labeled, so unfamiliar ones stand out.

---

### How do I remove a risky approval?

Fix Mode lists the approvals in order of exposure and guides you through revoking them. Each revoke is a transaction you review and sign yourself, from your own wallet.

---

### What is Wallet Watch?

Live monitoring that alerts you in the browser when a new approval appears on a wallet you watch.

---

### What is Wallet Passport?

A cryptographically signed, wallet-bound security record that reflects the wallet's security posture at the time it was issued.

---

### Can Elofid move funds from my wallet?

No. Elofid never holds keys and cannot move anything. Nothing happens in your wallet unless you sign it yourself.

---

## For wallets, exchanges, bots and security teams

### What is the difference between an Event and a Risk Incident?

An Event is one meaningful change detected from archived scan evidence, such as `liquidity_collapse` or `owner_changed`. A Risk Incident groups related independent Events into one factual incident with a lifecycle from open to resolved, so five changes do not become five alerts.

### How do I connect to the API?

The base URL is `https://api.elofid.com`. Every request uses `Authorization: Bearer <API_KEY>`, on every plan including Free. A workspace keeps one persistent key, and changing plans keeps the same key.

### How do I verify a webhook?

Each delivery carries `Elofid-Signature` in the form `v1=<hex>`. It is an HMAC-SHA256 of `Elofid-Timestamp`, a dot and the raw body, using your `whsec_` secret. Use `Elofid-Delivery-Id` to ignore duplicates. Incident webhooks are `elofid.incident.created`, `elofid.incident.updated` and `elofid.incident.resolved`.

### What are the plans?

Free includes 10,000 API calls per month and 7 days of history. Starter includes 50,000 calls and 30 days, Growth 250,000 calls and 60 days, Pro 1,000,000 calls and 90 days. Enterprise is custom.

### What is Global Intelligence?

What Elofid detects across the whole network, beyond your own watchlist. Free gets a live preview. Starter and above unlock full event details, history, filters and the Global Feed API.

### What counts toward my quota?

Only authenticated customer API calls. Dashboard traffic, internal webhook processing and `GET /v1/usage` do not count. When the quota is used up, the API returns `api_call_limit_reached`.

## Official channels and anti-scam rules

### How do I recognize official communication?

Only announcements on `elofid.com`, on Telegram at `@elofid_official` and on X at `@ElofidNetwork` are official. Admins will never message you first.

### Security checklist

- Never share a seed phrase or private key with anyone, for any reason
- Ignore private messages offering tokens, airdrops, recovery or urgent support in Elofid's name
- Verify the domain `elofid.com` before connecting a wallet
- Use a hardware wallet for long-term holdings
- If anything is unclear, do not connect and do not sign

### How do I report a vulnerability?

Privately, through GitHub private vulnerability reporting or by email to `security@elofid.com`. Please do not report vulnerabilities in public channels.

### **How do I contact Elofid?**

Support at [support@elofid.com](mailto:support@elofid.com). Enterprise and partnerships at [sales@elofid.com](mailto:sales@elofid.com). Community at [t.me/elofidcommunity](https://t.me/elofidcommunity).

## **06 · DISCLAIMER**

---

### **Risk and disclaimer**

#### **Is this financial advice?**

No. This FAQ is informational only and is not financial, investment, legal or tax advice. Scores, signals and warnings are not an audit.

---

#### **Is a clean result a guarantee?**

No. Security scans reduce risk but cannot eliminate it. Some figures come from third-party providers and can be delayed or incomplete, and network or website outages can affect results.

---
